

# The Overview

## WINDSURF PROJECT BRIEF

**Project Name:** Capability Tracker – Parent-Led Growth Assessment System

---

### **Goal:**

To build a digital evaluation tool for tracking child development across 10 defined capability areas. This tool allows a parent (or evaluator) to score a child monthly, store their assessment history, and visualize progress over time — all based on absolute performance rubrics (not age-relative).

---

## **EVALUATION CATEGORIES (All scored 0–10)**

1. **Speaking** – Fluency, vocabulary, clarity, and verbal confidence
2. **Listening** – Attention, comprehension, and responsive understanding
3. **Reading** – Fluency, comprehension, and critical thinking
4. **Writing** – Expression, grammar, structure, and creativity
5. **Typing** – Speed, accuracy, and digital fluency
6. **Maths** – Arithmetic, logic, and applied problem-solving
7. **Digital Competence** – Use of digital tools, navigation, and problem-solving
8. **Sports** – Physical ability, teamwork, coordination, and interest
9. **Character** – Integrity, reflection, self-awareness, and responsibility
10. **Hygiene** – Cleanliness, grooming, style, and care of personal space

Each score has a 10-point rubric with precise definitions.

---

## DATABASE STRUCTURE

### ◆ **profiles** Table (Tracks each child)

| Field                | Type      | Description                 |
|----------------------|-----------|-----------------------------|
| <b>id</b>            | UUID      | Primary Key                 |
| <b>full_name</b>     | Text      | Child's name                |
| <b>nickname</b>      | Text      | Optional                    |
| <b>birthdate</b>     | Date      | Optional                    |
| <b>created_at</b>    | Timestamp | Auto                        |
| <b>current_score</b> | Float     | Latest capability % (0-100) |
| <b>average_score</b> | Float     | All-time average            |
| <b>last_assessed</b> | Timestamp | Date of last assessment     |

### ◆ **assessments** Table (Logs each monthly evaluation)

| Field                            | Type      | Description                     |
|----------------------------------|-----------|---------------------------------|
| <b>id</b>                        | UUID      | Primary Key                     |
| <b>profile_id</b>                | UUID      | FK to profiles.id               |
| <b>date</b>                      | Timestamp | Date of evaluation              |
| <b>speaking</b> – <b>hygiene</b> | Integer   | 10 category fields (0-10 each)  |
| <b>total_score</b>               | Integer   | Sum of all 10 scores            |
| <b>capability_score</b>          | Float     | Percentage (total_score / 100)  |
| <b>notes</b>                     | Text      | Optional evaluator observations |
| <b>created_at</b>                | Timestamp | Auto timestamp                  |

### ◆ **rubrics** Table (*optional but recommended*)

Each category has 10 scoring levels for absolute reference.

| Field     | Type | Description |
|-----------|------|-------------|
| <b>id</b> | UUID | PK          |

|                          |         |                                           |
|--------------------------|---------|-------------------------------------------|
| <code>category</code>    | Text    | e.g., "Speaking", "Hygiene"               |
| <code>score_level</code> | Integer | 0–10                                      |
| <code>description</code> | Text    | Clear definition of what each score means |

## FEATURES & FUNCTIONALITY (Phase 1 MVP)

-  Add/edit child profiles
-  Enter new monthly assessments with scores + notes
-  Automatically calculate capability %
-  Show latest score and average on each profile
-  View all past assessments per child (audit trail)
-  Basic chart or trend line of capability % over time

## WINDSURF PROMPT (for devs or AI builder)

Build a parent-led capability tracking app that evaluates a child monthly across 10 defined areas.

Each score (0–10) follows a fixed rubric. After an assessment is submitted, it should:

- Save the assessment
- Update the child's `current_score`, `average_score`, and `last_assessed`
- Log a timestamped record in the history

Key tables:

- `profiles` (each child)
- `assessments` (each monthly record)
- `rubrics` (optional: stores 0–10 definitions per category)

UI should allow:

- Viewing and editing child profiles
- Entering a new assessment with sliders or dropdowns
- Viewing a dashboard with score history and current capability %

Bonus: Enable a future export feature (CSV or JSON) and allow rubrics to be dynamically editable via the UI.
